

## General Assembly

### Topic 2: integration of affordable technology to improve education in the under-developing countries.

We have seen our society advance at unprecedented rates in the technological space. Just looking back on recent years with the introduction of internet access, mobile phones, then the boom of smartphones, it is not surprising that the use of technology for training and education purposes has also been introduced.

The importance of technology in modern education is clear. It does not make sense to continue dated training methods, rather than adapting to the world around us. In fact, a recent study found that over 70% of instructors use technology in the classroom every day, compared to the year 2016 where 55% reported daily use. With the introduction of smart, relevant, technologies, this means that education is not only adapting to our modern world but also can drive better results than ever before through proven methods.

Technology is a body of knowledge devoted to creating tools to accomplish various tasks in our daily lives. We can describe technology as products and processes used to simplify our daily lives. This applies to anything we can or should do, this includes education.

Education is one of the most important things in life, if you combine technology with education, it is the best and fastest way of learning. Implemented technology in education can have many benefits. With the usage of technology, we can learn new things. Technology helps students to develop their interests. Classrooms are getting advanced with the arrival of the latest technologies like smart boards, laptops, tablets, visual

enhancement, etc. Digitalized education will save the environment. Education will be accessible to all students, especially for those who face financial crises. There are a lot of reasons why technology is an important aspect of the education sector.

To adapt to our modern digital habits, it only makes sense that we incorporate technology in education. Beyond adaptation, however, we know that, when used properly, technology in training and education can result in better learning.

Focus Questions:

1. How can we get this technology to under-developed countries?
2. Is it morally correct to have technology controlling education?
3. How can your delegation provide security if there is a misuse of it?
